Summary

I am a self-taught programmer looking for work in software development. I have 1 year of programming experience working on personal and volunteer projects. The bulk of my work has been primarily with C# with Unity3D. I also have basic web development experience with PHP and the CakePHP framework.

Projects

StarCitizenBase Portal Website   **Feb 2014 - Ongoing**
This is my first project with web technologies and my first experience with CakePHP and MVC. I am the main programmer working under the guidance of a more experienced PHP developer.

Unity3D Prototypes   **Jan 2013 – Jan 2014**
I discovered Unity last Spring, and just never stopped creating games with it. I learned C# so I could create bigger, better games with it. I got into my first databases with MySQL to create an account system and track player data.

Languages

C#, PHP, JavaScript, HTML, CSS

Software

Unity3D, Visual Studio, NetBeans, Git

Databases

MySQL

Certifications

Microsoft Certified Professional

Microsoft Technology Associate
